

## Chapter 9: Subnetting IP Networks

## Introduction to Networks

Cisco | Networking Academy®  
Mind Wide Open™

# Chapter 9

9.0 Introduction

9.1 Subnetting an IPv4 Network

9.2 Addressing Schemes

9.3 Design Considerations for IPv6

9.4 Summary

## Chapter 9: Objectives

Upon completion of this chapter, you will be able to:

- Explain why routing is necessary for hosts on different networks to communicate.
- Describe IP as a communication protocol used to identify a single device on a network.
- Given a network and a subnet mask, calculate the number of host addresses available.
- Calculate the necessary subnet mask in order to accommodate the requirements of a network.
- Describe the benefits of variable length subnet masking (VLSM).
- Explain how IPv6 address assignments are implemented in a business network.

## 9.1 Subnetting an IPv4 Network

Cisco | Networking Academy®  
Mind Wide Open™

## Network Segmentation

# Reasons for Subnetting

**Subnetting** is the process of segmenting a network into multiple smaller network spaces called subnetworks or subnets.

- Large networks must be segmented into smaller subnetworks, creating smaller groups of devices and services to:
  - Control traffic by containing broadcast traffic within each subnetwork.
  - Reduce overall network traffic and improve network performance.

## Communication Between Subnets

- A router is necessary for devices on different networks and subnets to communicate.
- Each router interface must have an IPv4 host address that belongs to the network or subnet that the router interface is connected.
- Devices on a network and subnet use the router interface attached to their LAN as their default gateway.

# IP Subnetting is FUNdamental

## The Plan

### Planning the Network

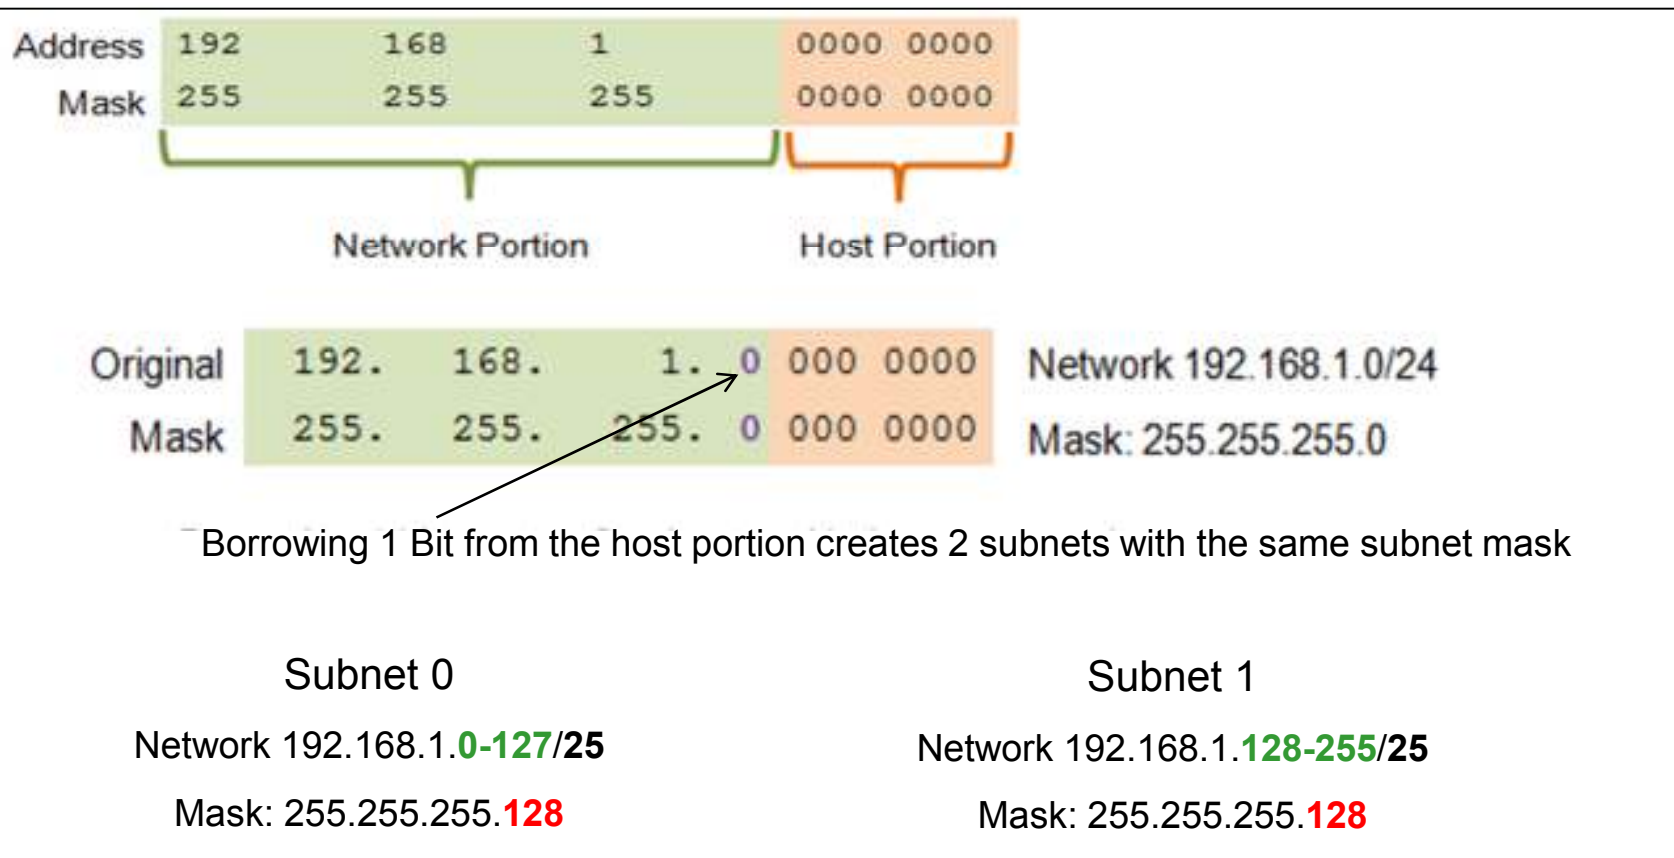

Planning requires decisions on each subnet in terms of size, the number of hosts per subnet, and how host addresses will be assigned.

# Subnetting an IPv4 Network

## Basic Subnetting

- Borrowing Bits to Create Subnets
- Borrowing 1 bit  $2^1 = 2$  subnets

# Subnetting an IPv4 Network

## Subnets in Use

### Subnets in Use

Subnet 0

Network 192.168.1.0-127/25

Subnet 1

Network 192.168.1.128-255/25

#### Address Range for 192.168.1.0/25 Subnet

Network Address

192. 168. 1. 0 000 0000 = 192.168.1.0

First Host Address

192. 168. 1. 0 000 0001 = 192.168.1.1

Last Host Address

192. 168. 1. 0 111 1110 = 192.168.1.126

Broadcast Address

192. 168. 1. 0 111 1111 = 192.168.1.127

#### Address Range for 192.168.1.128/25 Subnet

Network Address

192. 168. 1. 1 000 0000 = 192.168.1.128

First Host Address

192. 168. 1. 1 000 0001 = 192.168.1.129

Last Host Address

192. 168. 1. 1 111 1110 = 192.168.1.254

Broadcast Address

192. 168. 1. 1 111 1111 = 192.168.1.255

## Subnetting an IPv4 Network

# Subnetting Formulas

### Calculate number of subnets

Subnets =  $2^n$   
(where n = bits borrowed)

192. 168. 1. 0 000 0000

↑  
1 bit was borrowed

$2^1 = 2$  subnets

### Calculate number of hosts

Hosts =  $2^n$   
(where n = host bits remaining)

192. 168. 1. 0 000 0000

↑  
7 bits remain in host field

$2^7 = 128$  addresses per subnet  
 $2^7 - 2 = 126$  valid hosts per subnet

## Subnetting an IPv4 Network

# Creating 4 Subnets

Borrowing 2 bits to create 4 subnets.  $2^2 = 4$  subnets

### Creating 4 Subnets

## Subnetting an IPv4 Network

# Creating Eight Subnets

Borrowing 3 bits to **Create 8 Subnets**.  $2^3 = 8$  subnets

Net 0	Network	192.	168.	1.	000	0 0000	192.168.1.0

# Subnetting an IPv4 Network

## Creating Eight Subnets (Cont.)

## Determining the Subnet Mask

# Subnetting Based on Host Requirements

### Two considerations when planning subnets:

- Number of subnets required
- Number of host addresses required

### Formula to determine number of usable hosts: $2^n - 2$

- $2^n$  (where  $n$  is the number of remaining host bits) is used to calculate the number of hosts.
- -2 (The subnetwork ID and broadcast address cannot be used on each subnet.)

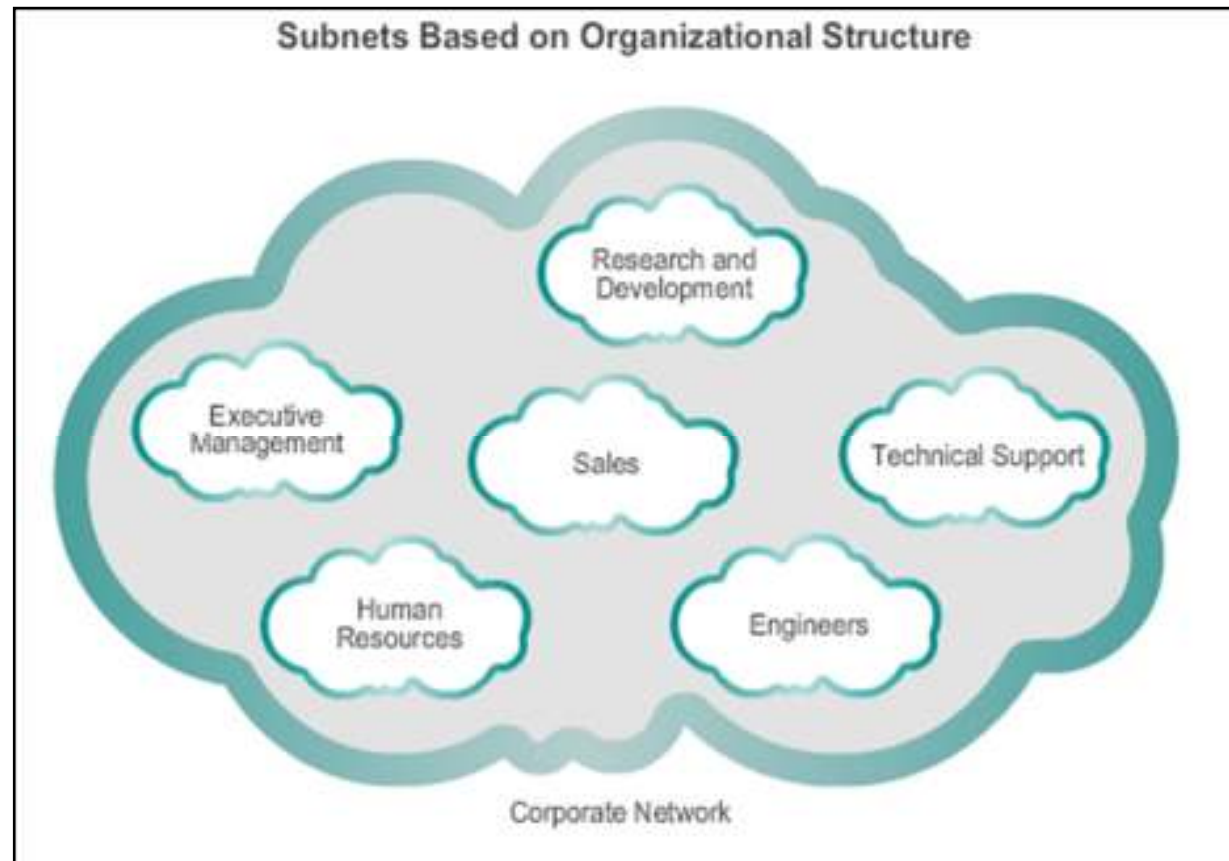

## Determining the Subnet Mask

# Subnetting Network-Based Requirements

### Calculate the number of subnets:

- $2^n$  (where  $n$  is the number of bits borrowed)
- Subnet needed for each department.

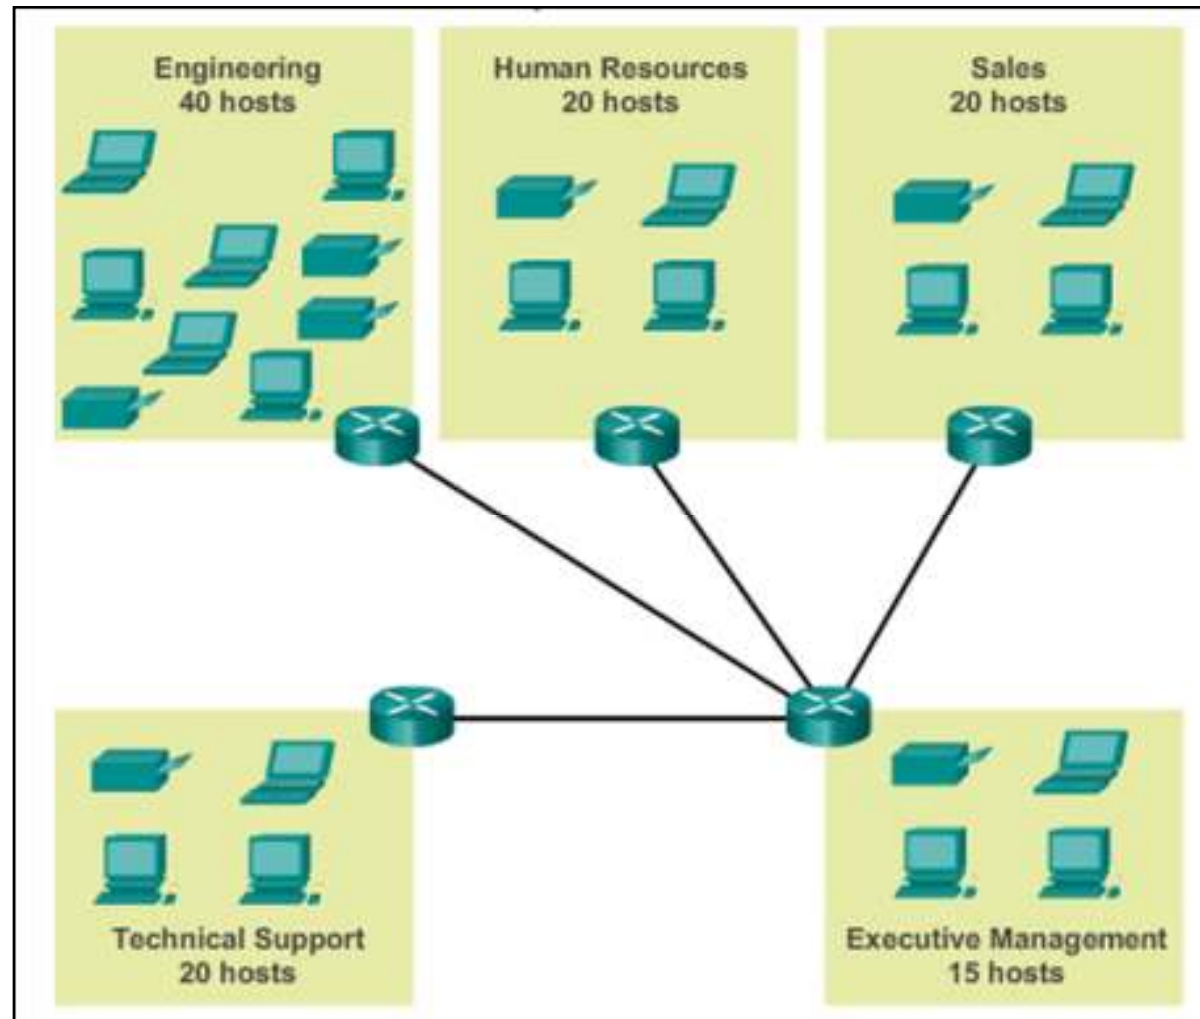

## Determining the Subnet Mask

# Subnetting To Meet Network Requirements

- Balance the required number of subnets and hosts for the largest subnet.
- Design the addressing scheme to accommodate the maximum number of hosts for each subnet.
- Allow for growth in each subnet.

## Determining the Subnet Mask

# Subnetting To Meet Network Requirements

### Subnets and Addresses

	10101100.00010000.00000000.00000000	172.16.0.0/22
0	10101100.00010000.00000000.00000000	172.16.0.0/26
1	10101100.00010000.00000000.00000000	172.16.0.64/26
2	10101100.00010000.00000000.00000000	172.16.0.128/26
3	10101100.00010000.00000000.00000000	172.16.0.192/26
4	10101100.00010000.00000000.00000000	172.16.1.0/26
5	10101100.00010000.00000000.00000000	172.16.1.64/26
6	10101100.00010000.00000000.00000000	172.16.1.128/26

### Nets 7 – 14 not shown

15	10101100.00010000.00000000.00000000	172.16.3.128/26
16	10101100.00010000.00000000.00000000	172.16.3.192/26

$2^4 = 16$   
 subnets

$2^6 - 2 = 62$   
 Hosts per  
 subnet

## Benefits of Variable Length Subnet Masking

# Traditional Subnetting Wastes Addresses

- Traditional subnetting – Uses the same number of addresses is allocated for each subnet.
- Subnets that require fewer addresses have unused (wasted) addresses; for example, WAN links only need two addresses.

Traditional Subnetting Creates Equal Sized Subnets

## Benefits of Variable Length Subnet Masking

# Variable Length Subnet Masks (VLSM)

- The variable-length subnet mask (VLSM) or subnetting a subnet provides more efficient use of addresses.
- VLSM allows a network space to be divided in unequal parts.
- Subnet mask varies, depending on how many bits have been borrowed for a particular subnet.
- Network is first subnetted, and then the subnets are resubnetted.

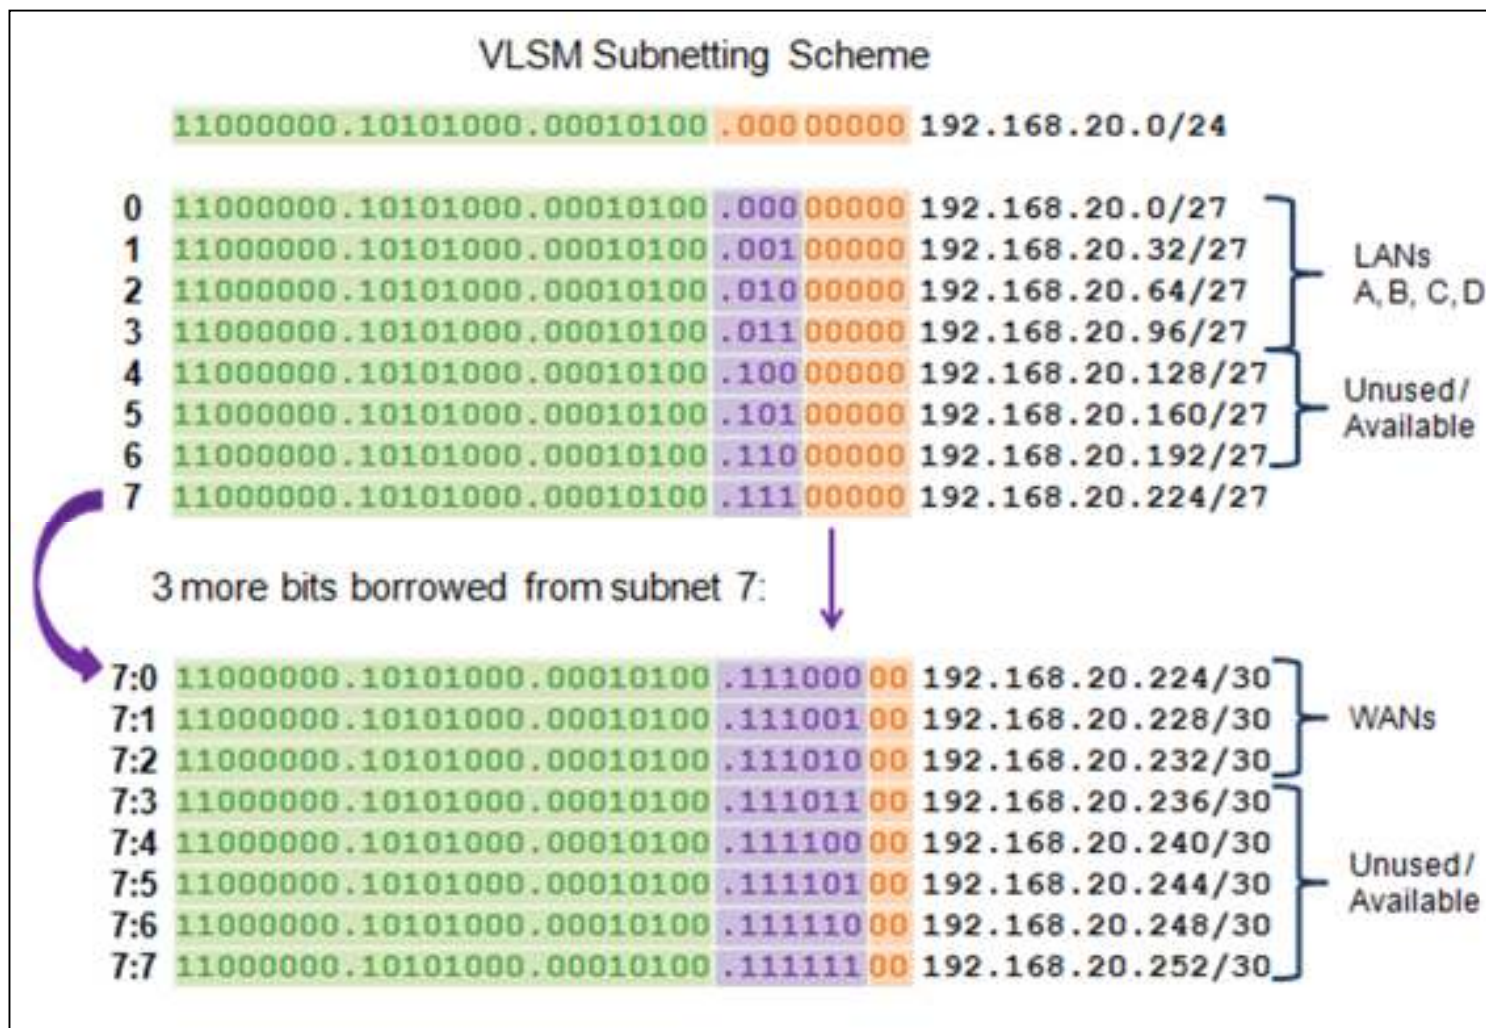

# Benefits of Variable Length Subnet Masking

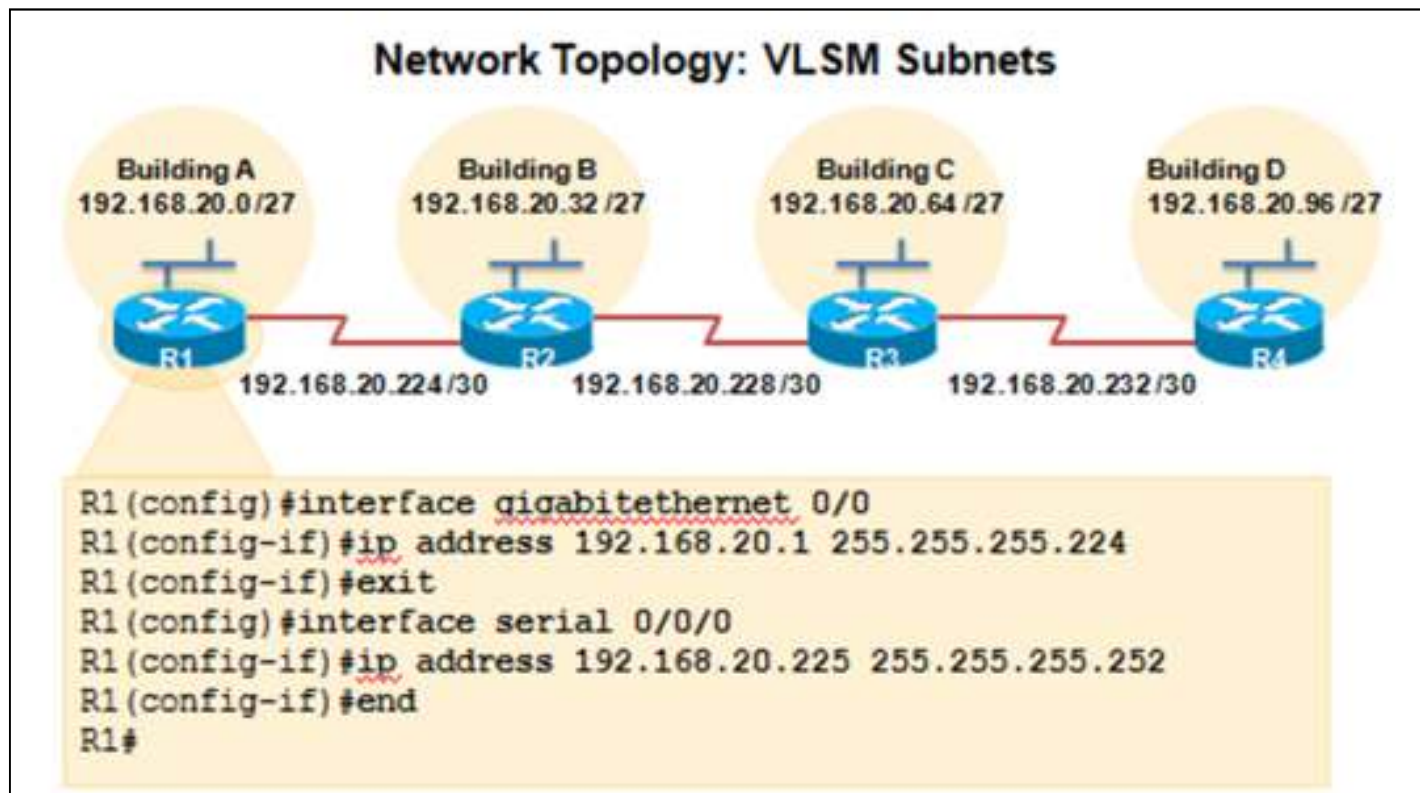

## Basic VLSM

## Benefits of Variable Length Subnet Masking VLSM in Practice

- Using VLSM subnets, the LAN and WAN segments in example below can be addressed with minimum waste.
- Each LANs will be assigned a subnet with /27 mask.
- Each WAN link will be assigned a subnet with /30 mask.

# Benefits of Variable Length Subnet Masking

## VLSM Chart

**VLSM Subnetting of 192.168.20.0 /24**

	/27 Network	Hosts
<u>Bldg A</u>	.0	.1 - .30
<u>Bldg B</u>	.32	.33 - .62
<u>Bldg C</u>	.64	.65 - .94
<u>Bldg D</u>	.96	.97 - .126
Unused	.128	.129 - .158
Unused	.160	.161 - .190
Unused	.192	.193 - .222
	.224	.225 - .254

	/30 Network	Hosts
WAN R1-R2	.224	.225 - .226
WAN R2-R3	.228	.229 - .230
WAN R3-R4	.232	.233 - .234
Unused	.236	.237 - .238
Unused	.240	.241 - .242
Unused	.244	.245 - .246
Unused	.248	.249 - .250
Unused	.252	.253 - .254

## 9.2 Addressing Schemes

Cisco | Networking Academy®  
Mind Wide Open™

## Structured Design

# Planning to Address the Network

Allocation of network addresses should be planned and documented for the purposes of:

- Preventing duplication of addresses
- Providing and controlling access
- Monitoring security and performance

Client addresses – Usually dynamically assigned using the Dynamic Host Configuration Protocol (DHCP).

Sample  
Network  
Addressing  
Plan

Network: 192.168.1.0/24		
Use	First	Last
Host Devices	.1	.229
Servers	.230	.239
Printers	.240	.249
Intermediary Devices	.250	.253
Gateway (router LAN interface)	.254	

## 9.3 Design Considerations for IPv6

## Subnetting an IPv6 Network

# Subnetting into the Interface ID

IPv6 bits can be borrowed from the interface ID to create additional IPv6 subnets.

## 9.3 Summary

Cisco | Networking Academy®  
Mind Wide Open™

## Chapter 9: Summary

In this chapter, you learned that:

- Subnetting is the process of segmenting a network, by dividing it into multiple smaller network spaces.
- Subnetting a subnet, or using VLSM, was designed to avoid wasting addresses.
- IPv6 address space is subnetted to support the hierarchical, logical design of the network.
- Size, location, use, and access requirements are all considerations in the address planning process.
- IP networks must be tested to verify connectivity and operational performance.
